EXPERIENCE

Paycom

June 2025 – February 2026

Software Engineer

Irving, TX

- Solely architected and delivered a full-stack solution to automate benefit terminations and date synchronization, eliminating wrongful payroll deductions and ensuring accuracy for **40,000+** corporate clients system wide
- Executed a large-scale cleanup of the code base, removing legacy code related to feature flags to optimize application logic, significantly reduce tech debt and allow for global feature enablement, resulting in **1,800+** changes
- Enhanced Application Security by identifying and patching high-priority Cross-Site Scripting (XSS) vulnerabilities, implementing strict input validation and escaping parameters to ensure data sanitization and system integrity
- Led root cause analysis by investigating **Splunk** error logs, identifying architectural flaws regarding objects and implementing logic to handle uninitialized objects and null parameters, preventing runtime crashes
- Designed and deployed a **Python** automation script to identify and batch-close Sub Task Execution items based on specific ticket criteria, streamlining administrative workflows and saving management **2+** hours weekly

AT&T

June 2024 – August 2024

AI Engineer Intern

Dallas, TX

- Trained a machine learning model using **Azure API** to automate the retrieval of **2,000+** images, performing image quality assessments with **OpenCV** to filter out low-quality images, ultimately enhancing training data quality
- Developed an image processing solution using **OpenCV** for color extraction to identify orange paint marks on the ground, and integrated a deep learning model for query analysis to validate and enhance detection accuracy
- Leveraged **Large Language Models (LLMs)** to link images with textual descriptions, systematically testing and refining inputs, improving classification and categorization accuracy of complex image sets

AT&T

June 2023 – August 2023

Data Analyst Intern

Dallas, TX

- Published a dashboard in **Tableau** using **SQL** to aggregate data, showcasing critical information on **300K+** unpenetrated buildings in AT&T's Fiber network, ultimately leading to an increase in building penetration by **4%**
- Designed a sales report using **Tableau** and **SQL**, delivering insights on impact of AT&T's Dynamic Pricing Tool
- Partnered with channel managers to research solution providers in the Indirect Channel, formulating a telecom budget to compile a list of under utilized providers, estimating **3%** more revenue per provider

TECHNICAL SKILLS

Languages: Python, Java, PHP, JavaScript, SQL, C/C++, HTML/CSS

Frameworks and Tools: React, REST APIs, Splunk, OpenCV, PowerBI, Tableau, Node.js, Azure

Databases: Snowflake, MongoDB, SQL Server

EDUCATION

The University of Texas at Dallas

Richardson, TX

Bachelor of Science in Computer Science

May 2025

PROJECTS

Stock Trend Notifier & Analyzer | *Python, Claude API, REST APIs*

May 2026

- Developed an automated Python pipeline using **yfinance** api to track market volatility and identify price drops exceeding a **2%** threshold from market open and notify the user daily
- Integrated the **Claude API** to fetch and programmatically analyze financial news context surrounding market dips, generating sentiment evaluations to differentiate between temporary drops and structural controversies

Unifi | *React, Node.js, Express.js, MongoDB, Git*

November 2024

- Developed a responsive **React.js** Fintech banking interface, utilizing **RESTful APIs** to process and display real-time account balances and transactions
- Developed a database, storing user profiles, balances, and related data, ensuring data integrity and accessibility
- Implemented secure authentication using Express.js and JWT, protecting user sessions and sensitive information

WrappedNow | *JavaScript, HTML/CSS, Rest API*

June 2023

- Developed a dynamic web application integrating the Spotify Web API to retrieve a user's personalized statistics, including top artists and songs over multiple timeframes
- Implemented OAuth to securely receive data from users' Spotify accounts without exposing user credentials
